(54) Title: A TUBULAR COMPONENT PROVIDED WITH MUTUALLY ORIENTED THREADED ELEMENTS, AND A
METHOD FOR PRODUCING IT

(57) Abstract: In the method according to the invention, after machining suc-
cessively respective threaded elements at both ends of the tubular component
(10), a second orientation gauge is screwed onto the second threaded element
to check whether a mark (4) on the gauge comes into alignment with an orienta-
tion mark (11) which has been drawn on the component, after the first element
has been machined and a first orientation gauge has been screwed onto the
latter in axial alignment with a mark provided on this gauge. If not, the ma-
chining of the second element is repeated with parameters varied accordingly.
Application to the drilling and operation of hydrocarbon wells.
